2.3 Fuel Models

Some key properties of fuel:

1. Mass
2. Shape
3. Spatial configuration or arrangement
4. Heat content
5. Moisture
6. Type
7. Position

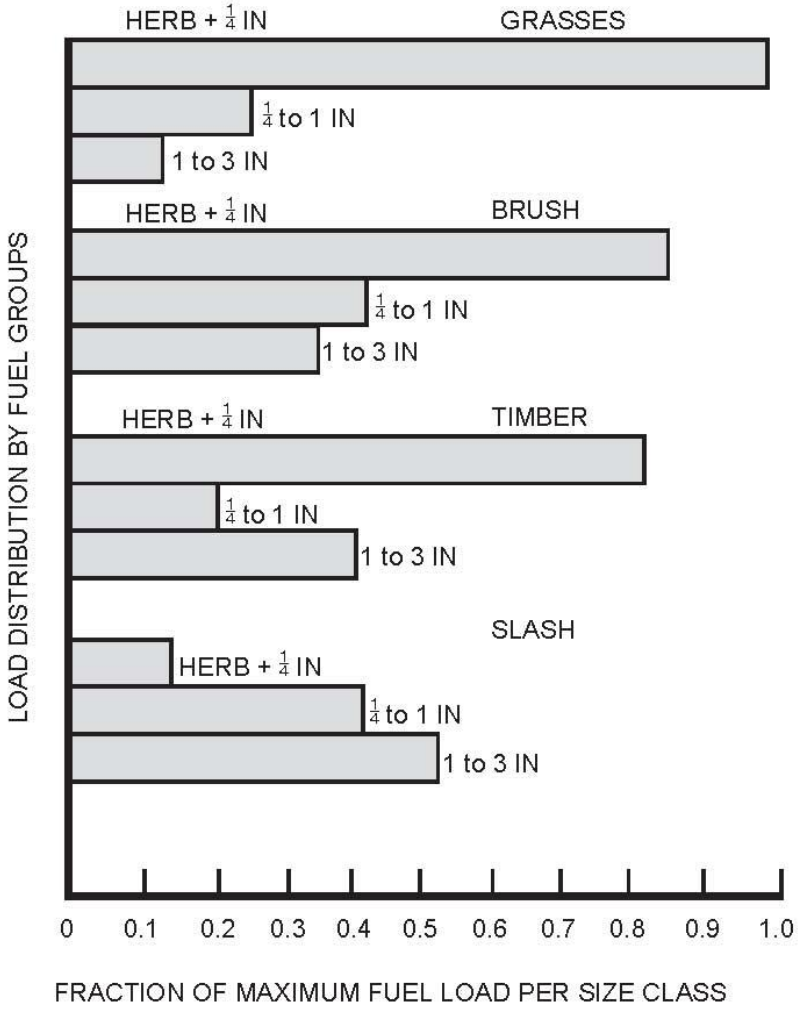
Together these create a **FUEL MODEL**

Fuel models

- A fuel model is a way of characterizing the fuel of a location
- Simplifies some of the complexity
- Provides a range of fuel mass values (kg/ha) in different fuel sizes
- Fuel models are used extensively in fire behavior computer modeling

Two main classification systems:

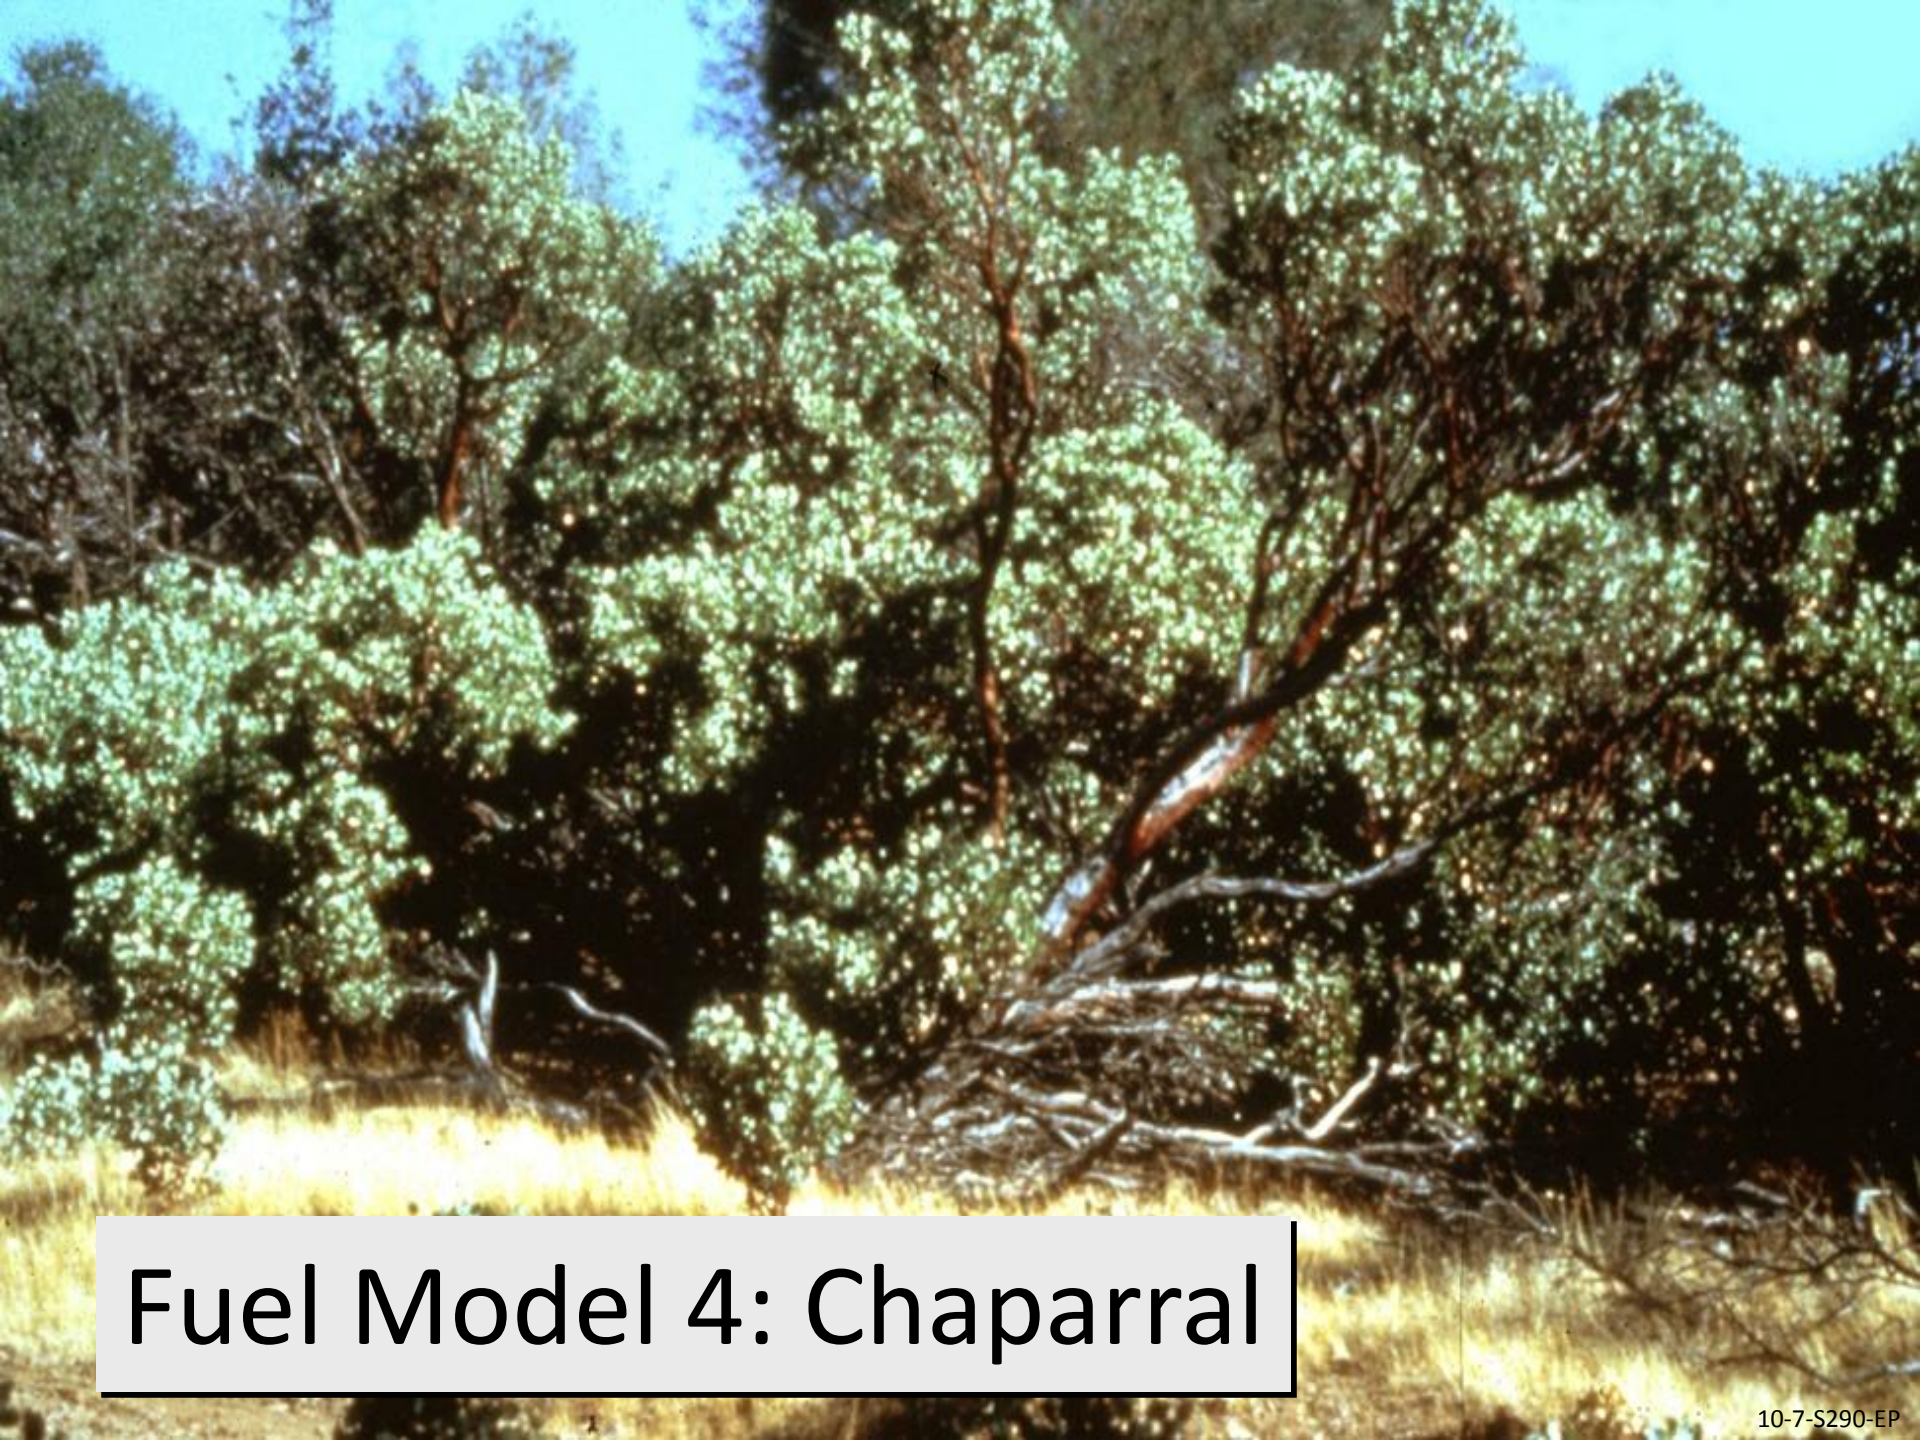
1. **Hal Anderson (1982)**
    1. Based on original systems by Albini (1976) and Rothermel (1972)
    2. Provided a consistent basis for classifying wildland fuels
    3. 13 fuel types (grouped by grass, shrub, timber, and logging slash)
    4. Linked to fire behavior parameters (fuel mass, size, fuel bed depth, moisture, etc.), National Fire Danger Rating System (NFDRS), BehavePlus



Note the proportions of small, medium, and large fuels in the major fuel model categories

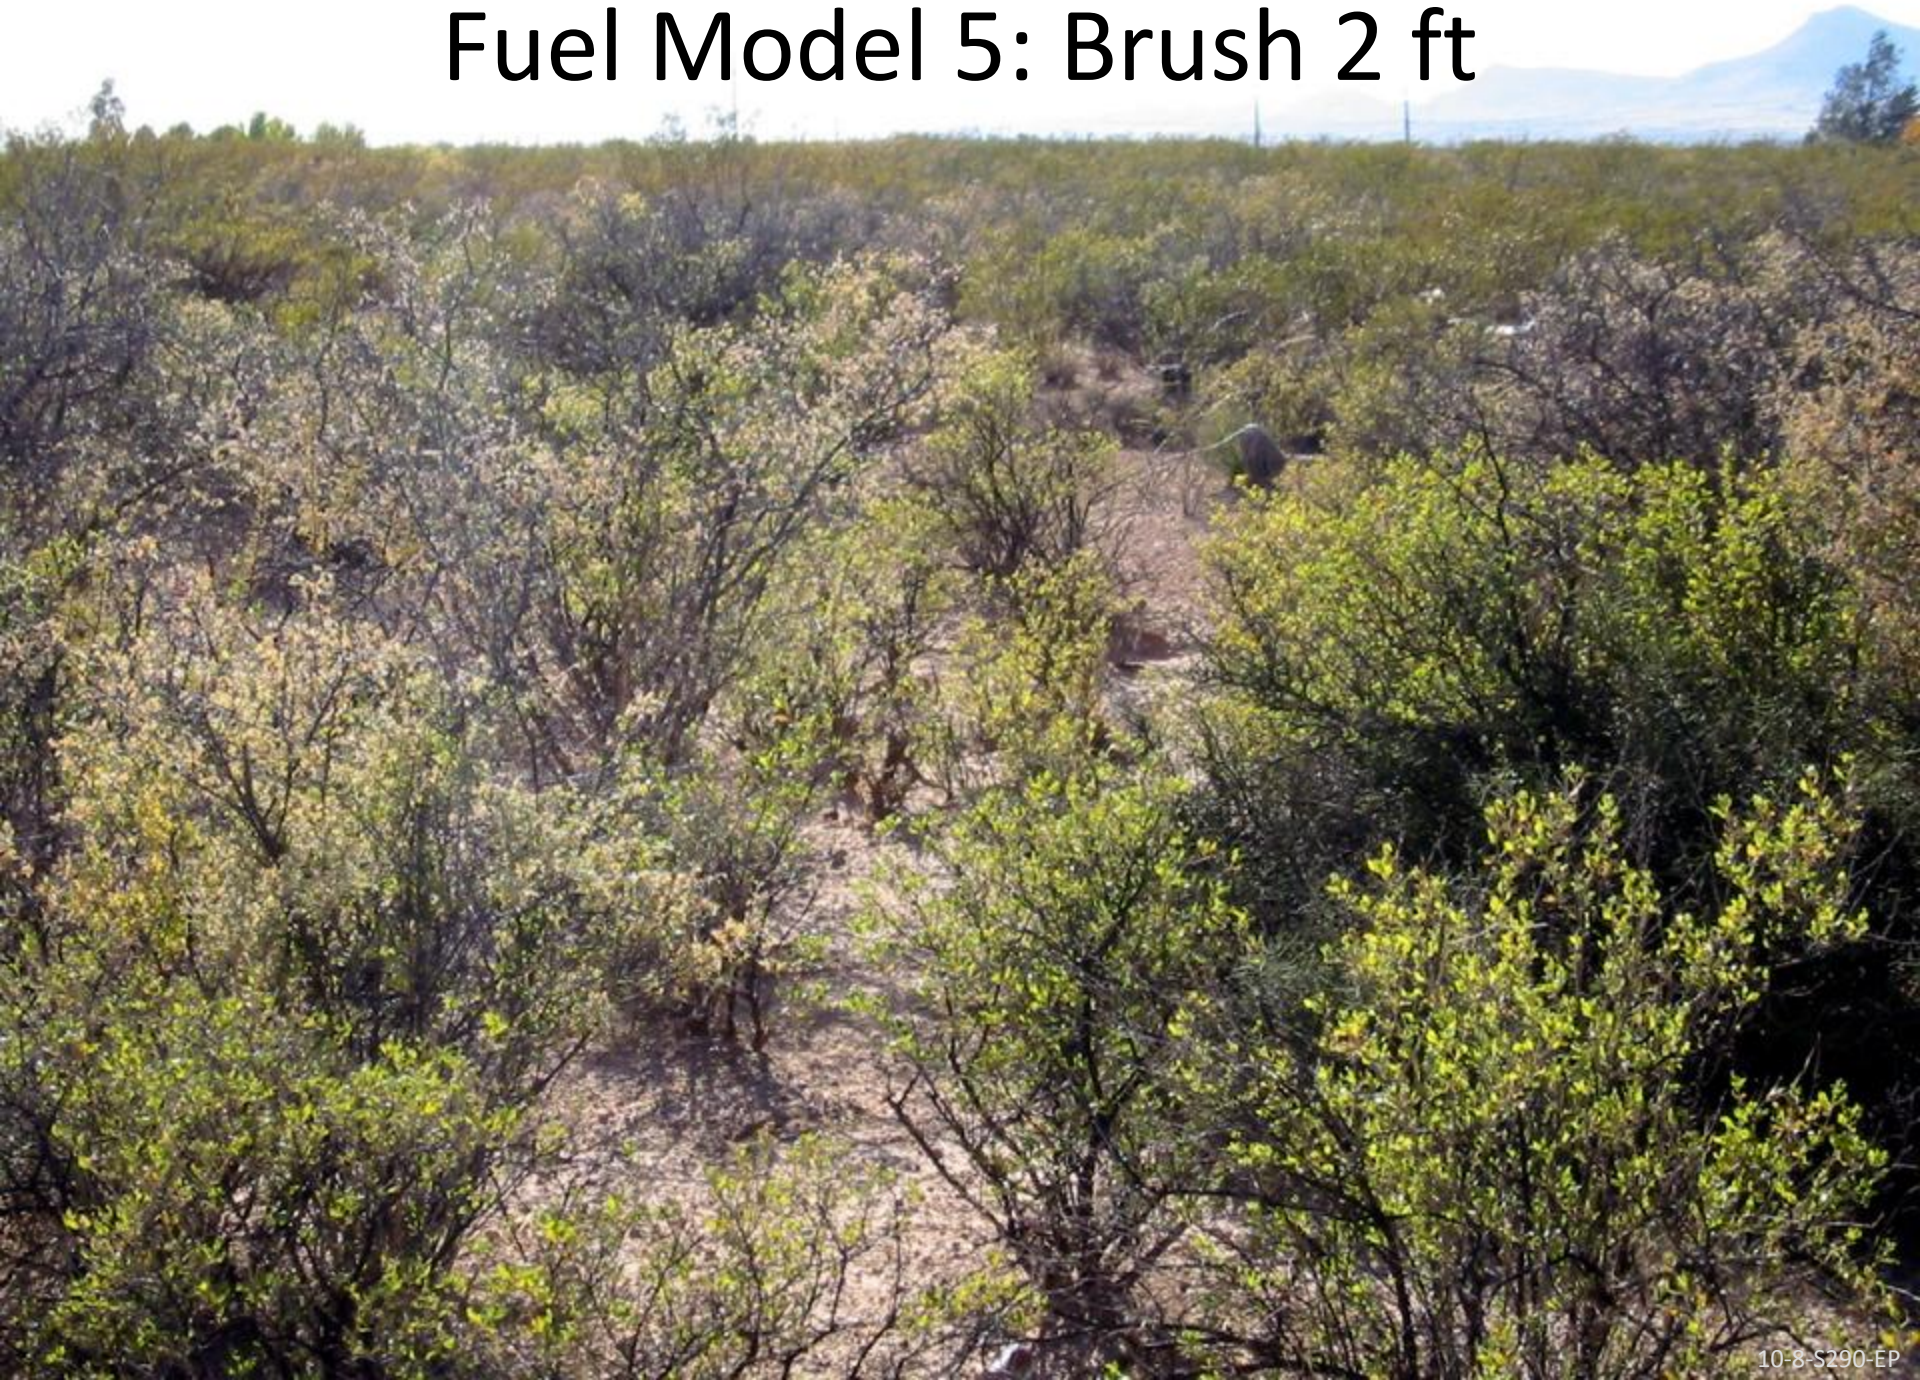
Anderson 1982, Fig. 1

Fuel Model 2: Timber with grass understory



Fuel Model 4: Chaparral

Fuel Model 5: Brush 2 ft



Fuel Model 7: Southern rough

Fuel Model 10: Timber with litter understory

2. Scott and Burgan (2005)

1. Biggest innovations in fuel classification since 1980s
2. Broke out fuel types into finer, more accurate classes (45 models)
3. Includes dynamic element (herbaceous live fuels transfer to dead component as fuels dry out)

Scott, Joe H.; Burgan, Robert E. 2005. **Standard fire behavior fuel models: a comprehensive set for use with Rothermel's surface fire spread model. Gen. Tech. Rep. RMRS-GTR-153.** Fort Collins, CO: U.S. Department of Agriculture, Forest Service, Rocky Mountain Research Station. 72 p.

Table 7—Fuel model parameters.

Fuel model code	Fuel load (t/ac)					Fuel model type[a]	SAV ratio (1/ft)[b]			Fuel bed depth (ft)	Dead fuel extinction moisture (percent)	Heat content BTU/lb)[c]
	1-hr	10-hr	100-hr	Live herb	Live woody		Dead 1-hr	Live herb	Live woody

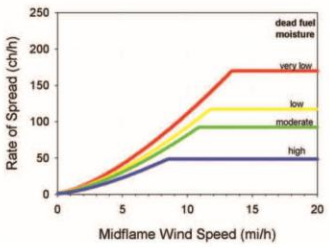
[a] Fuel model type does not apply to fuel models without live herbaceous load.
[b] The value 9999 was assigned in cases where there is no load in a particular fuel class or category
[c] The same heat content value was applied to both live and dead fuel categories.

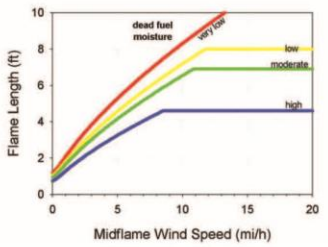
GR2 (102)

Low Load, Dry Climate Grass (Dynamic)

Description: The primary carrier of fire in GR2 is grass, though small amounts of fine dead fuel may be present. Load is greater than GR1, and fuelbed may be more continuous. Shrubs, if present, do not affect fire behavior.

Fine fuel load (t/ac)	1.10
Characteristic SAV (ft-1)	1820
Packing ratio (dimensionless)	0.00158
Extinction moisture content (percent)	15



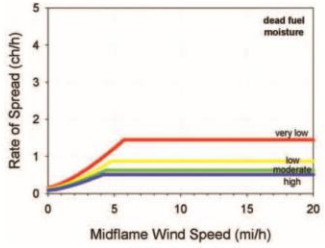


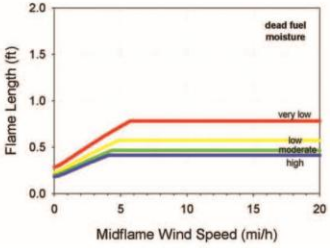
TL1 (181)

Low Load Compact Conifer Litter

Description: The primary carrier of fire in TL1 is compact forest litter. Light to moderate load, fuels 1 to 2 inches deep. May be used to represent a recently burned forest. Spread rate is very low; flame length very low.

Fine fuel load (t/ac)	1.0
Characteristic SAV (ft-1)	1716
Packing ratio (dimensionless)	0.04878
Extinction moisture content (percent)	30





Next: Fire weather!
