

## **ABE/RNR 613**

### **Project Instructions**

1. Each group consists of 2 students (students from different areas are highly encouraged to work together).
2. The project involves statistical analysis of data, preparation of a report written in the format of a scientific paper, and presentation. Both report and presentation will be evaluated.
  - The report will be due the last day of class and presentation will be scheduled the last week of class.
  - The report format should be single line spaced and no more than 5 pages (figures, tables, and references included).
  - Each group will have about 18~20 minutes for presentation and questions. PowerPoint slides need to be emailed to the lecturer after presentation.

If you already work on a research project and have collected data you are welcome to use the dataset from your research, provided that you go beyond your research for the class. You can use a dataset from the textbook of this course. Please email the instructor by **Nov 11** about what dataset your group would like to work on.
