

Pesticide Information Request

Active Ingredients: Metaldehyde and Iron Phosphate

Crops/targets: Several crops, slugs would be the target pests

Questions: What price do growers typically pay for metaldehyde and iron phosphate? This would probably best be answered on a per acre basis if possible. John will be figuring out the application rates based on the California pesticide reporting system.

Respond to:

Faulkner.John@epamail.epa.gov

Wilfred.burr@ars.usda.gov

Deadline: December 22nd.

Background information: Epa is doing an economic comparison of metaldehyde and iron phosphate to be used in determining mitigation measures for metaldehyde.

Thank you so much for your help.

Wilfred Burr
