Production Update:

**Cutting schedules:** In the low desert valleys of Arizona, cutting is recommended when most of the crown buds have started regrowth but before they are greater than 2 inches in length. Cutting at one-tenth bloom is not satisfactory under our conditions since 1) length of regrowth from crown buds in Arizona can vary from 1 to 4 inches at one-tenth bloom depending on the time of the year and 2) in late winter and early spring, alfalfa does not flower in our low desert valleys because of cool temperatures and short daylengths. If cutting is delayed and the crown regrowth is harvested, plant development is slowed since new crown growth must develop.

**Insect Management:** Before treating Egyptian alfalfa weevil larvae with an insecticide, sample each field quadrant by taking 5 sweeps with a standard net. Count the number of weevil larvae in each 5 sweep sample and add the totals for each of the field quadrants. Divide the grand total for the field by the total number of sweeps (20). Treated with an insecticide registered for weevil control in alfalfa when the average number of larvae reaches or exceeds 20 per sweep. If sweep counts are 10 to 15 larvae per sweep just before cutting, applying malathion under the windrows may be considered.

**Weed Control:** Raptor is a new alfalfa herbicide that will soon be available in Arizona. It has been developed by BASF and is similar to Pursuit but more effective on sowthistle, prickly lettuce, lambsquarters and grasses. Half of the active ingredient as is applied with Pursuit is utilized and the plant-back restriction should not be as long.

10 Year Summary (February 26, to March 11, 1993 - 2002)

---

Barry R. Tickes  
Extension Agent, Agriculture  
Yuma County Cooperative Extension

Michael Ottman  
Extension Agronomist  
University of Arizona

Eric T. Natwick  
Farm Advisor, Entomology  
Imperial County Cooperative Extension

Issued in furtherance of Cooperative Extension work, acts of May 8 and June 30, 1914, in cooperation with the U.S. Department of Agriculture, James A. Christenson, Director, Cooperative Extension, College of Agriculture and Life Sciences, The University of Arizona.

The University of Arizona College of Agriculture and Life Sciences is an equal opportunity employer authorized to provide research, educational information and other services only to individuals and institutions that function without regard to sex, race, religion, color, national origin, age, Vietnam Era Veteran’s status, or disability.
