GROWING SEASON TEMPERATURES

---

Cool March, Warm Spring & Early Summer, Cool July, Tough August.

---

Prescription For Excellent Fruit Retention During Primary Bloom.
GROWING SEASON PRECIPITATION

-- Dry Spring, Wet Monsoon.

-- Above Normal Precipitation for Growing Season Driven By Wet Monsoon.

SUMMER WEATHER

-- Above Normal Dew Points in Both Monsoon Months.

-- Cool July; Temperatures Cooled Each Time Humidity Increased.

-- Difficult August: Above Normal Temperatures & Humidity.
**HEAT STRESS BY LOCATION**

--- Limited Heat Stress in June & July
--- Very Difficult Stretch of Level 2 Stress From 6-14 August
--- Less Stressful on East Side
--- Buckeye & Maricopa Received Greatest Stress

**WARMING TREND**

--- Warming Trend Less Apparent at Coolidge
--- Better Indicator of Heat Stress Relative to Past Years
HEAT STRESS BY PLANTING DATE

Less Stress @ Peak Bloom & Cutout, Especially Early Plantings

HEAT STRESS & YIELDS

Years above trend line subjected to 50% less heat stress prior to peak bloom.
REAL TIME MONITORING

http://128.196.12.87:85/

--- Real Time Assessment of Heat Stress
--- Canopy Temperature Model Assessment/Improvement

EL NIÑO UPDATE

CLIMATE PREDICTION CENTER/NCEP/NWS
and the International Research Institute for Climate and Society
6 September 2012

ENSO Alert System Status: El Niño Watch

Synopsis: El Niño conditions are likely to develop during September 2012.

El Niño Southern Oscillation (ENSO)

Oscillation of sea surface temperatures and wind flow in tropical Pacific Ocean
TROPICAL PACIFIC OCEAN

Last Year

NOAA/NESSIS SST Anomaly (degrees C), 8/19/2011

ENSO ALTERS CIRCULATION
OF ATMOSPHERE

El Niño

La Niña

Storm track often sets up in a more southerly location that allows wet, relatively warm storms to enter the Southwest.

Circulation sets up in ridging pattern that diverts storms north of the Southwest leading to very dry conditions.
**AREAS IMPACTED BY ENSO**

Pink & Orange Areas Exhibit Highest Correlation With ENSO Phase

**FALL/WINTER PRECIPITATION**

South Central Arizona

South Central Climate Division
Maricopa & Pinal Counties

Note! Higher Probabilities When Fall & Winter Combined. May Represent Occasional Fall Tropical Storms During El Niño Years.

EL NIÑO

Winter & Fall + Winter Precipitation

Above Normal: 47.6% of Time
Above Average: 66.7% of Time

Above Normal: 52.4% of Time
Above Average: 71.4% of Time

Note! Higher Probabilities When Fall & Winter Combined. May Represent Occasional Fall Tropical Storms During El Niño Years.
LA NIÑA

Winter & Fall + Winter Precipitation

La Nina
November to March Precipitation

Below Normal: 59.1% of Time
Below Average: 86.4% of Time

La Nina
September to March Precipitation

Below Normal: 63.7% of Time
Below Average: 72.7% of Time

Precipitation Forecasts During La Niña Years Are More Reliable – Dry!

WHAT ABOUT THIS YEAR?

El Niño Forecasted to Reach Weak to Moderate Strength

South Central AZ Climate Division
El Nino Strength

Precipitation totals are nearly the same in years with neutral and weak to moderate El Niño conditions. The probabilities of below normal & above normal precipitation are similar in weak/moderate El Niño years.

Precipitation forecasts are less definitive with weak/moderate El Niño's.
STRONG vs. WEAK

Strong
September 1997

Weak
September 2012

SEPTEMBER & OCTOBER

All El Niño Falls

--Above Normal: 38%
--Normal: 38%
--Below Normal: 24%

Weak/Moderate El Niño Falls

--Above Normal: 60%
--Normal: 30%
--Below Normal: 10%

Longer Monsoon?? Occasional Stronger Tropical Storms??
WEAK/MODERATE EL NIÑO

Heavy Precipitation In Three of Last Four Times With Weak/Moderate El Niño

STRONG EL NIÑO

Strong El Niño Years: Far More Definitive Forecast for Wet Falls/Winters
Longer term fluctuation in the temperature of the Pacific Ocean. Warm & cool phases relate to Pacific coast of US. Much greater changes occur in northern Pacific & exhibit opposite temperature anomalies.
**TAKE HOME MESSAGE**

- El Niño Developing
  - Weak to Moderate Strength
- Falls/Winters Trend Wet
- Long Range Forecasts
  - Fall: Wet Bias
  - Winter: Wet Bias (Esp. Late)
- Weak/Moderate El Niño
  - Less Definitive Precipitation
  - Last 4 Occurrences
    - 1977/78: 174% of Average
    - 1994/95: 157% of Average
    - 2004/05: 188% of Average
    - 2006/07: 70% of Average
- Late Development
  - Wet Later in Winter?
