Our Mission

We develop innovative treatments that improve the speech and movement of people with Parkinson’s disease (PD) and other neurological conditions. We train speech, physical and occupational therapists around the world in these treatments so that they can positively impact the lives of their patients.

Our Story

LSVT Global grew out of a clinical need to help people with Parkinson’s regain their lost vocal abilities. The scope of this work was eventually expanded to help people with PD improve their movements. Years of research and development led to effective treatments and a vibrant company whose core goal is to improve the lives of adults and children afflicted with neurological conditions.

In business since 2003, we are increasing the reach of our cutting-edge treatment approaches by offering expanded clinical training programs, greater online access to existing training, and exciting new applications to pediatrics.

Stats

Corporate Headquarters
Tucson, Arizona, US

Research and Development Office
Denver, Colorado, US

By the Numbers
- 24,000+ speech-language pathologists trained and certified in LSVT LOUD in 70 countries
