PLS 217
Introduction to Hydroponics & Controlled Environment Agriculture.
Fall Semester
Tu/Th 3:00-5:30pm

Learn the history of hydroponics and controlled environment agriculture. Gain understanding of plant physiology and anatomy and how cultural practices affect plant protection, transplanting, pollination and plant nutrition. Further your knowledge of practical concerns affecting greenhouse site selection, greenhouse structures, controls, and strategies to “green” the greenhouse and excel in business through better understanding of marketing, economics & business plans.
