LOVE YOUR HEART AND YOUR HEALTH
Move it or lose it. The human form is built to move. Exercise is reported to be better than medicine. Sitting has been called the “new smoking” and like this habit, we should give it up. Is it enough to stand? No, we need to move. Exercising may keep diseases at bay. It helps us sleep, makes blood pressure steady, promotes a stable weight, along with reducing anxiety and depression. The more active you are, the better off you will be. Whatever exercise you enjoy is the one you should do. We don’t have to be members of a gym, or participate in a triathlon, to reap the benefits of exercise. According to this Guardian article, “Every vigorous minute is the equivalent of two moderately active minutes.”

To maintain bone health, schedule time for weight bearing exercises, or weight lifting. If you don’t have access to weights, use everyday objects and your body weight for resistance. Life & Work Connections offers a resistance bands class every Wednesday at noon.

KNOW THE SIGNS OF A HEART ATTACK
February is American Heart month. Do you know the most common symptoms of a heart attack? According to the National Heart, Lung and Blood Institute, symptoms include: chest pain, upper body discomfort and shortness of breath. Women are likely to experience other symptoms such as nausea and vomiting, shortness of breath, unusual tiredness (which may last for days) and pain in the back, shoulders and jaw.

Lifestyle changes can promote a healthy heart and reduce the likelihood of a heart attack. Walk Across Arizona participants are encouraged to increase physical activity, the consumption of fruits and vegetables, and foster a sense of community. These goals align with recommendations for heart health. Other desired changes in the program include quitting smoking, managing stress and weight. Life & Work Connections has resources to help achieve your lifestyle goals.
